Heat More Efficiently

The Glow Radiant Brooder is available in Liquid Propane (LP) or Natural Gas (NG), and has 3 control methods – individual, zone, or whole house.

The **Glow Radiant Brooder** from VAL-CO® uses infrared heating technology to quickly and efficiently warm the floor and chicks rather than wasting heat on the air that rises above the brooding area.

- 34” canopy (86 cm) with a BTU/Hr rating to 40,000 (10,100 k/cal) - for altitudes >1000m the capacity is 30,000 BTU/Hr (7,560 k/cal).
- Ignition options include the gas-saver horizontal pilot, vertical pilot, and pilot-free direct spark.
- Easy, trouble-free assembly and cleaning with snap-together pieces. Available factory-assembled burners provide quick installation.
- Unique leveler brackets quickly adjust canopy in two directions – side-to-side and front-to-back for even heat.
