

Continuous inlets are designed to run the entire length of the house.

Engineered to Provide Economical Air Distribution.

An Investment In Value

VAL-CO Air Inlet Doors are designed and engineered to provide an economical means of air distribution in a mechanically ventilated barn.

Framed Inlet Doors

Design Features:

- All vinyl construction
- Foam insulated doors
- Flexible door seals
- Full-length polymer hinge
- Door and seal directs air up along ceiling
- Cleans up easily
- Easy installation
- Plastic latch seals door tightly (optional)
- Rust resistant hinges will not stick
- 12" width doors available in standard lengths (Custom lengths available for special order)
- Completely sealed to keep destructive bugs and rodents away from foam

Continuous Inlet Doors

Same door as above, but without the frame and in continuous 8 ft. sections or stand alone 8 ft. kits with end caps. Allows for continuous vent to run the entire length of the house.

Performance You Can Count On

Metal Doors

Galvanized vent doors feature Stainless Steel hinges for long life and extended closure bracket for easy actuation.

Tunnel Inlet Doors

With seven times the insulation value of curtains, they reduce cold zones during winter that cause heaters to use more gas. You are also able to force the air up to eliminate dead air spots. The VAL-CO doors are made to be installed continuously, but can also be installed individually between knee braces. Our continuous hinge is reinforced with Stainless Steel for durability. Our Tunnel Inlet Doors have internal wooden stiffeners for added reinforcement, and an extra large continuous seal along the top and ends to seal out drafts. Better insulation, tight seals, and better airflow all combine to make your house more efficient and save you money.

Call your local **VAL-CO** representative or distributor for more information on these and our other fine products.
