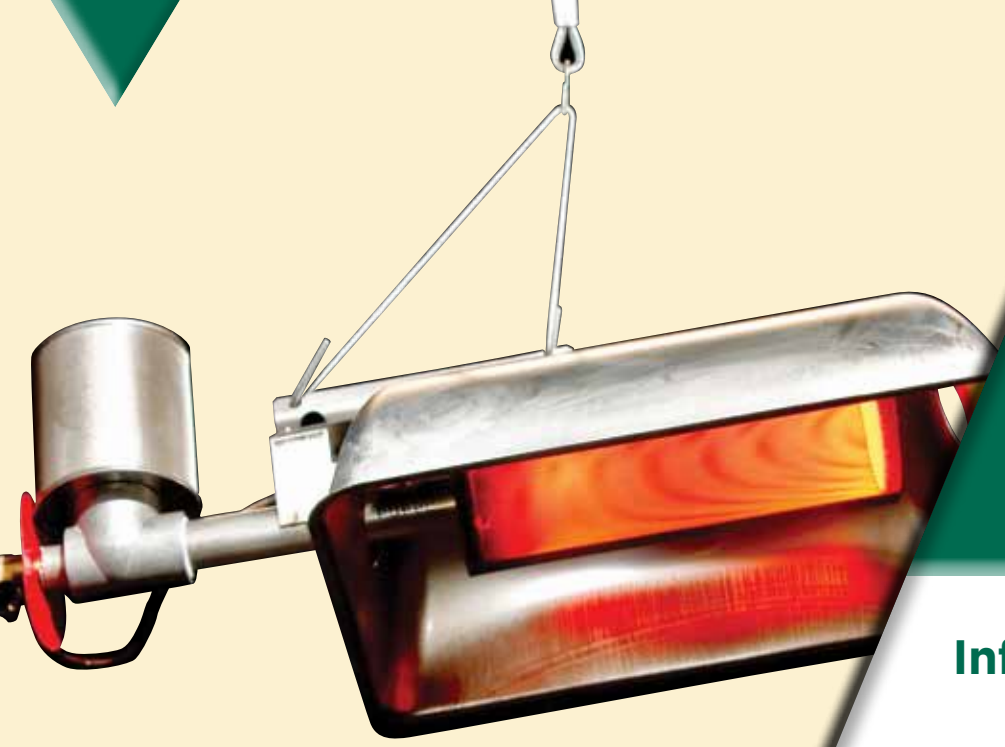
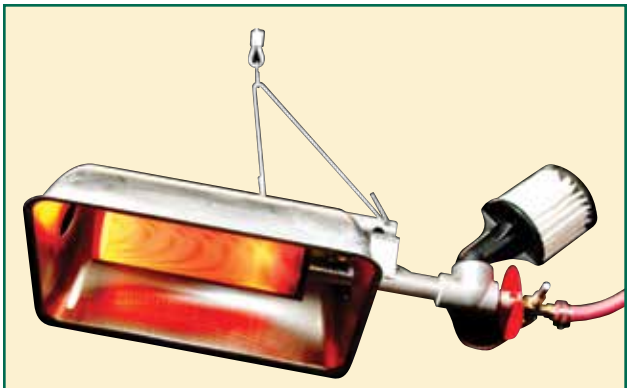
Increase Temp, Not Costs

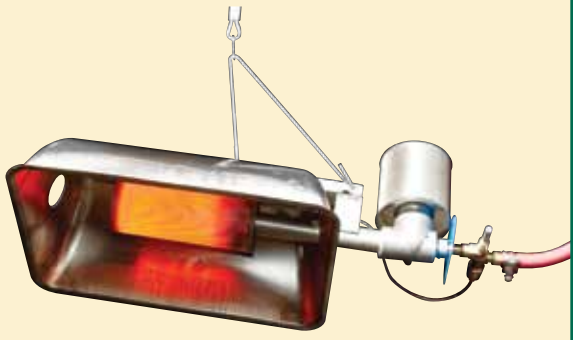


The M8 Infrared Heater with Standard Filter.

Infrared Heaters allow you to concentrate the heat directly to the animals and the floor, rather than heating the entire building which uses significant amounts of energy.



The M8 Infrared Heater with Heavy Duty Filter.



The M5 Infrared Heater with Standard Filter. Also available in a filterless model.

- Provide your animals with their own comfort zone created by the patterns of heat projected from the infrared heater, which provides you with lower fuel costs.
- The M8 (max. BTU/hr 17,200) & M5 (max. BTU/hr 10,850) are constructed of stainless steel and can withstand high pressure washouts for worry-free cleaning.
- Both of these heaters are available in propane and natural gas versions.
- The straight-forward design leads to low maintenance and easy service.
