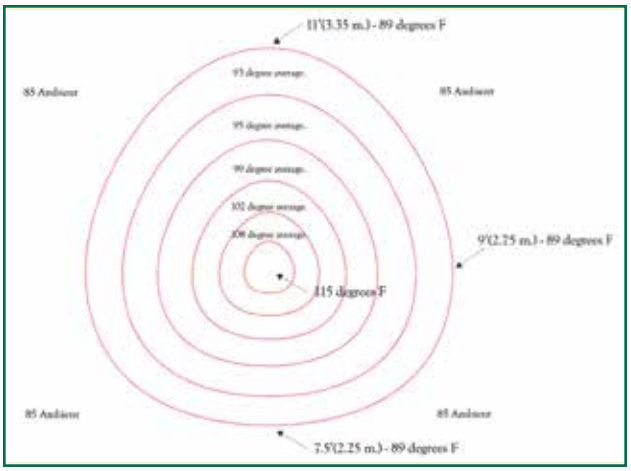
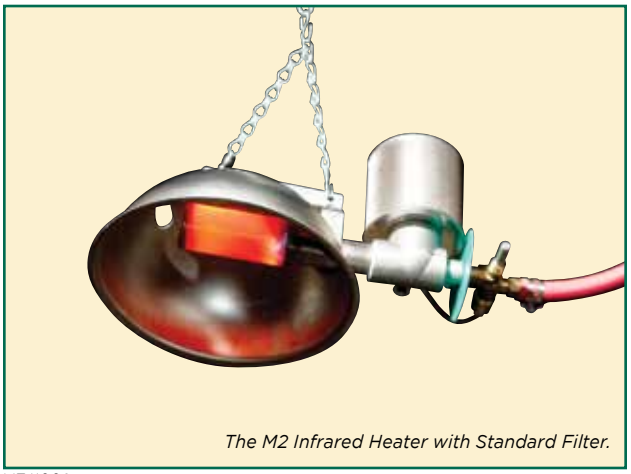
Turn Up The Heat, Not Costs

The M3 Infrared Heater with Standard Filter.

Infrared Heaters allow you to concentrate the heat directly to the animals and the floor, rather than heating the entire building which uses significant amounts of energy.



- Provide your animals with their own comfort zone created by the patterns of heat projected from the infrared heater, which provides you with lower fuel costs.
- The M3 (max. BTU/hr 5,425) & M2 (max. BTU/hr 3,450) are constructed of stainless steel and can withstand high pressure washouts for worry-free cleaning.
- Both of these heaters are available in propane and natural gas versions.
- The straight-forward design leads to low maintenance and easy service.



The M2 Infrared Heater with Standard Filter.
