

Built In Efficiency & Versatility

The **V-Fan** is a variable speed, direct drive fan that provides higher total CFM at full speed as well as remarkably high CFM/Watt measurements at low speeds.

- The V-Fan motor is not only VFD-driven, meaning the frequency (hertz) to the motor is driven, but it's also a PMAC motor, yielding greater efficiency than induction VFD-driven motors.
- V-Fan is direct drive - so no belt to maintain or bearings to grease.
- Available in fiberglass (24", 36", 50", 54"), Sable™ (36", 54"), galvanized (36", 54") and Z-Fan™ materials (36", 54").
