

*Flush Mount Light Trap Fan Transition*

# Don't Be In The Doghouse.

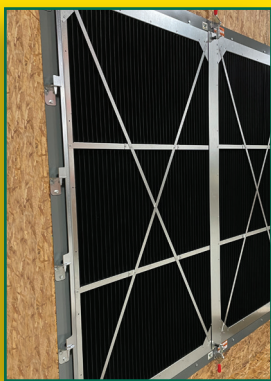

## Flush Mount & Non-Flush Mount Light Trap Fan Transition Kits

Eliminate the need for building a dog house for your fans if you are using a light trap to block out light. The flush mount design is very robust and has powder coat over galvanized steel transition panels for even more protection. The non-flush mount kit is great for retrofits where you want to add light traps in front of exhaust fans without a major construction project.

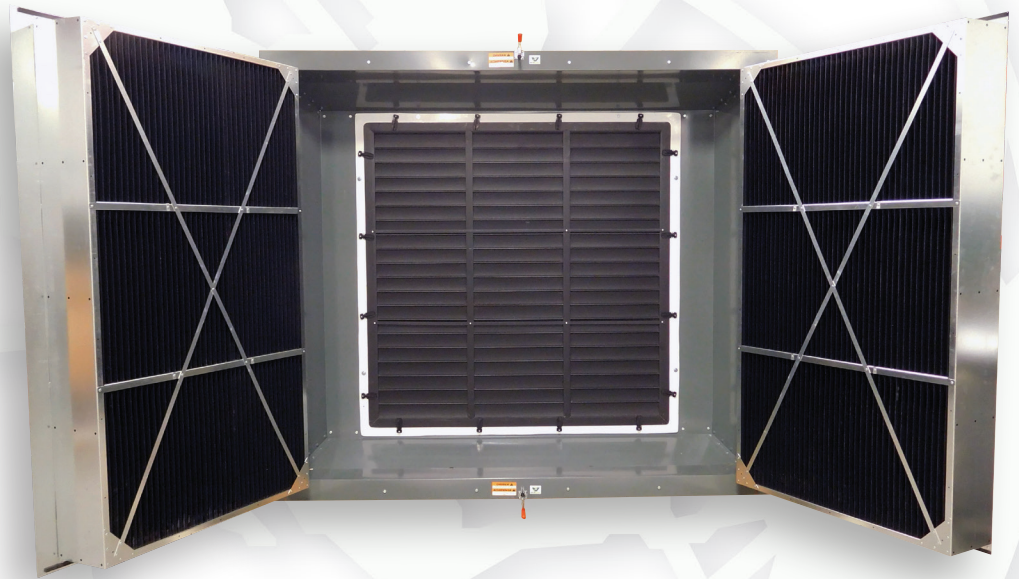

### Light Trap Fan Transition Kit Features

- The light traps on hinges so it is easy to swing the light trap open to access your fan to clean the shutter, grease the bearings, check the belt tension.
- Ships unassembled which helps save money on freight
- Large effective area of light trap which reduces the static pressure that the fan experiences

Part #	Description
<b>Flush Mount Kits</b>	
819015	60"h x 60"w (for 36" FG Fans)
819045	72"h x 84"w (for 54" FG Fans)
