

Corner Chick Guard

410597 & 410598

Quick Sheet

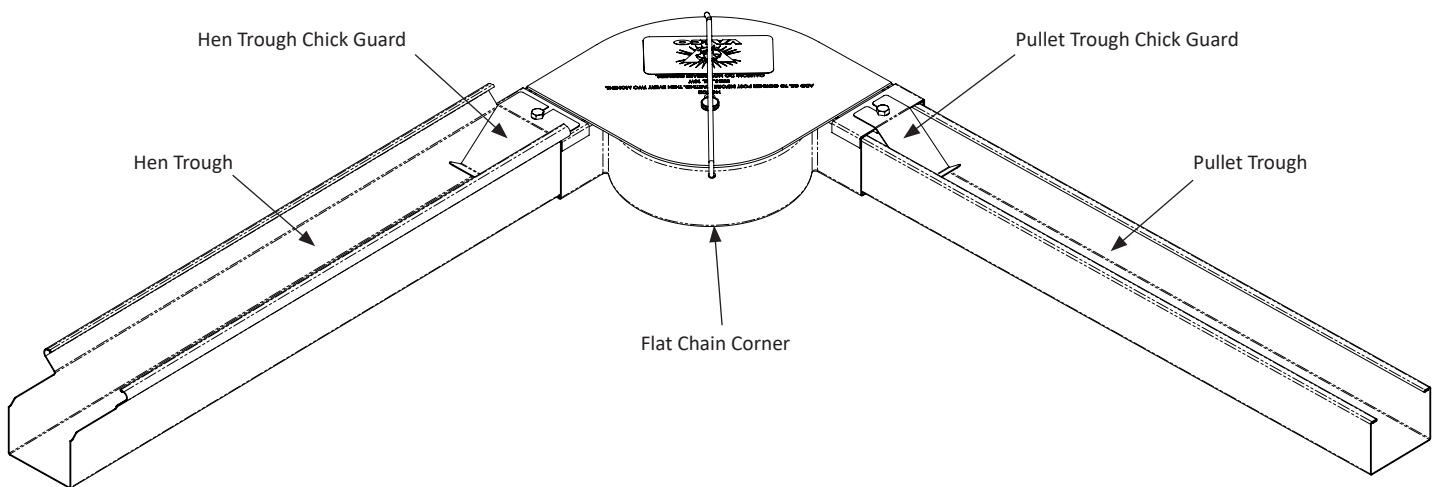

Set corner chick guard height such that it does not cause feed build-up by being set too low. Also set it so that it does not allow a chick to get under it by being too high.

Chick guards help to minimize the chances of chicks getting entangled in feed corners, but cannot fully prevent chicks from injury if chain is run while birds have access to chain feeding system.

Overview

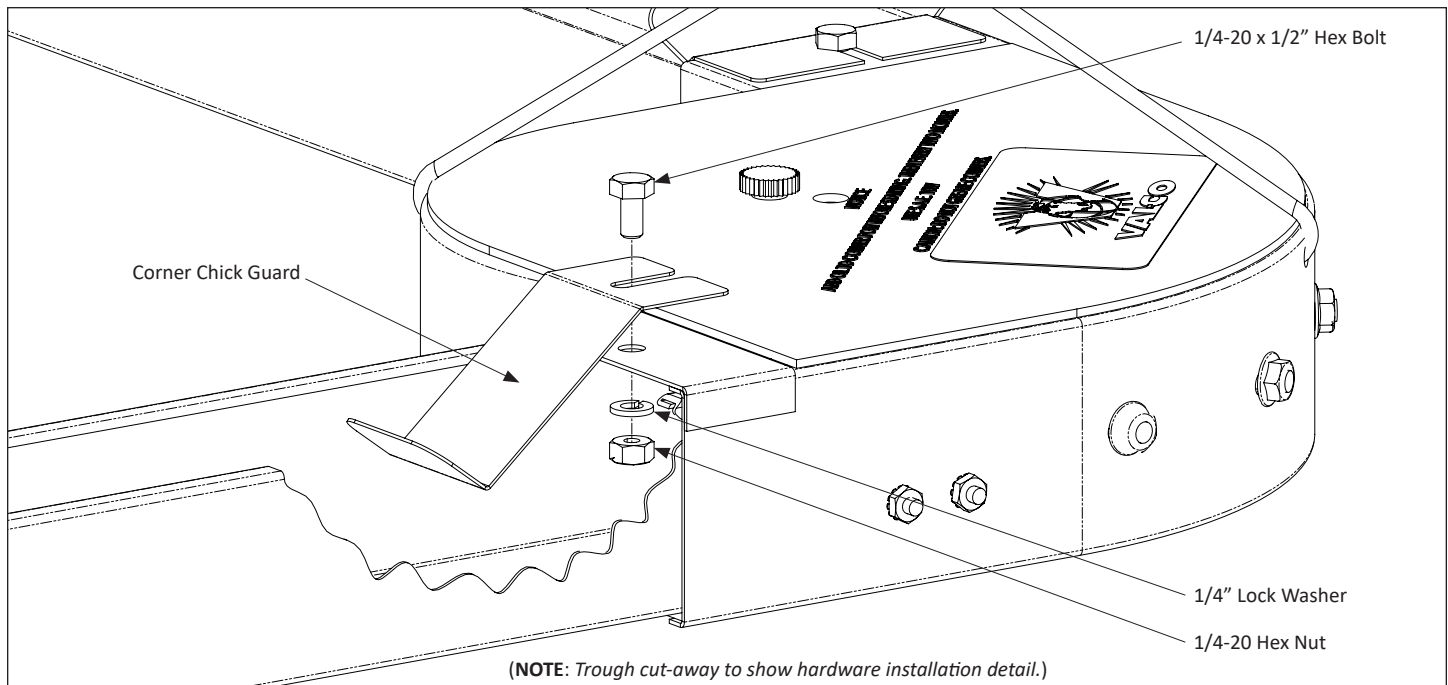

NOTE: The Corner Chick Guard (*Pullet Trough: 410597* and *Hen Trough: 410598*) is only designed to be used on VAL-CO flat chain corners.

Installation

Step 1: Use supplied 1/4-20 x 1/2" hex bolt, 1/4" lock washer, and 1/4-20 hex nut to fasten corner chick guard to pre-drilled hole in flat chain corner.

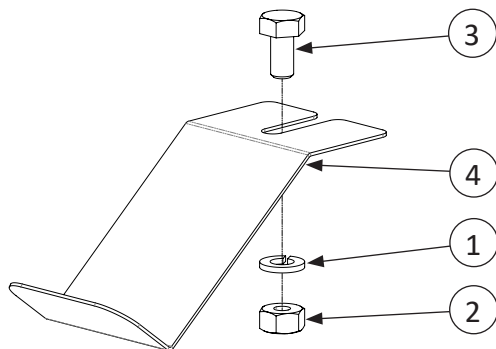

Step 2: Adjust position of corner chick guard by sliding position of slot or by bending guard to desired height.

Step 3: Tighten hardware once corner chick guard is in desired position.

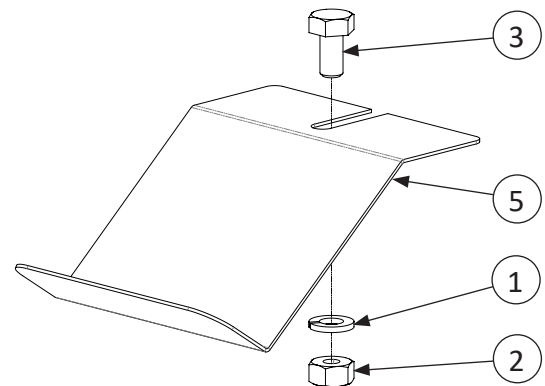

Corner Chick Guard Repair Parts
