

Reduced Light With Great Airflow

The **Eclipse™ Light Trap Fan Transition Kit** from VAL-CO® enables you to get significant light reduction with minimal performance loss and is great for use with tunnel fans.

Flush Mount Eclipse Fan Transition allows for easy access to the fan

- The larger spacing between the Eclipse panels helps reduce the amount of debris build-up.
- The flush mount design is very robust and has powder coat over galvanized steel transition panels for even more protection.
- The light reduction panels are on hinges so it is easy to swing them open to access your fan to clean the shutter, grease the bearings, check the belt tension.
- Ships unassembled which helps save money on freight.
