Fine Tune Your Environment

The **PolAIR® High Pressure Fog System** from VAL-CO® produces tiny drops of water into the air that flash evaporate, altering the ambient conditions

The PolAIR high-pressure fog nozzle is unique to the industry and the heart of the system performance.

- The PolAIR fog nozzle atomizes water into micron-sized particles to reduce temperature, increase relative humidity, suppress airborne contaminants and can be used to disperse certain chemical treatments.
- Configured to your house with little or no structural modifications.
- Ideal for many applications, including for layer and floor birds.
- With little maintenance the system will operate for many years without any issues.
