

Take Control

The **Ventra PRO Controllers** from VAL-CO have options that can help to save you time and money, including One-Touch Access to Pertinent Information – like daily high/low temperatures, water usage, feeder run times, etc.

- Plug-in relays make it easy to swap parts in the field with minimal downtime.
- Multiple programs are stored on one SD card for quick changing of seasonal ventilation parameters.
- Heat purge capable – since heated air holds more moisture, less air needs to be exhausted to remove moisture, and gentler temperature swing is easier on the animals for improved health.
- Toggle between Spanish or English at the touch of a button.
