

Get Noticed

The **Aqua-V Drinker** from VAL-CO, available in standard and PFA models, features a bright neon lime green color that attracts birds to their water source.

- Ideal for convertible or aviary systems.
- Designed around the venerable VR series drinker, it brings the Quencher's value and competitive price to the layer market.
- The Aqua-V PFA is perfect for your pullets, as it requires less force to actuate, making it easier for young birds, especially hatchery beak treated birds.
- The TruSeal™ standpipe cap seals against water when the drinker lines are flushed, helping prevent messy water spills.
