

Block The Light, Not The Airflow

The **Light Traps** from VAL-CO® offer high light reduction, low airflow resistance, streamlined profiles, high corrosion resistance and a low cost installation.

Also available as a metal framed cartridge

- Light traps efficiently block external natural light from entering the house through fans and inlet openings.
- The light traps are dense enough to cut the light, but will not inhibit airflow.
- Units are available in multiple sizes and configurations to fit your needs.
- Available pre-assembled or unassembled.
