

Get Fresh, Uniform Air Everywhere

The **Hemisphere Z-Pro Mixing Fan** helps maintain consistent temperatures throughout the house with patented technology developed for whole house air mixing.

- Low profile (12” tall) design makes it perfect for low clearance ceilings in swine, layer, and floor bird applications.
- The innovative design dramatically reduces temperature variations in the facility by moving a large volume of air with minimal drafts.
- Operates at low static pressure so exhaust fan efficiency improves and the electrical load reduces.

Optional attic inlet available
