

The bright color of the Aqua-V drinker attracts birds to their water source.

The TruSeal™ standpipe cap seals against water when the drinker lines are flushed, helping prevent messy water spills.

The Aqua-V™ from VAL-CO®

The Aqua-V nipple drinker by VAL-CO was developed for the layer industry, ideal for convertible or aviary systems. Designed around the venerable VR series drinker, it brings the Quencher's value and competitive price to the layer market. For your pullets, we offer the Aqua-V PFA - a Precision Feather Action (PFA) version of the Aqua-V, which requires less force to actuate, making it easier for young birds, especially hatchery beak treated birds. This new style of "J-Lock" drinker is made of precision machined stainless steel and will be offered in standard and high flow variants. Birds love the bright new color, too! The Aqua drinker's neon lime colored body not only makes it easy for birds to see, but visually differentiates the drinker from other VAL-CO drinker offerings. Get noticed, with the Aqua-V.
