

# A More Open Nest Is More Inviting!

## Introducing the Liberty One™ Aviary Colony Nesting System from VAL-CO®

The VAL-CO Liberty One Aviary Colony Nesting System is designed to make birds comfortable going into an open nest to lay eggs. The larger nest holes and nest pads are inviting to the birds which helps prevent floor eggs and leads to greater output of high-quality eggs. Ventilation holes in the partitions help provide an ideal environment. An expeller pushes birds out when necessary to aid in keeping the nest pads clean and help prevent broodiness.

*Partition holes provide ideal ventilation  
and the nest pads provide comfort.*

### Features & Benefits:

- Very durable; manufactured from steel
- Nest measures 48" x 48" (121.9 cm x 121.9 cm), with a belt running through the center, and can house 100 birds (50 per side)
- A 7° pitch on the nest floor gently rolls eggs on to the belt
- A large 12" belt provides ample space for the eggs to reduce cracking
- Perforated mats enhance egg cleanliness
- Black curtains on the front provide an ideal environment for laying eggs
- Black curtains in the back of the nest helps prevent pecking at the eggs
- Easy to clean

The VAL-CO Liberty One Aviary Colony Nesting System, manufactured with steel, is designed to be used at varying heights. Legs can be set at different heights; even having the nests sit directly on the floor. The egg belt drive is designed to follow the height of the nest with adjusting rods so that the drive can be as low as the nest. An egg elevator collects eggs from any height belt and can be released at a predetermined height for manual collection or delivery to a cross conveyor.

Nests can be placed directly on slats to be used in a more conventional barn. Or nests can be suspended from the ceiling, its height managed by a winching system. Winched system can be kept out of the way during rearing, and it makes for easy clean out.
