

Cooling Made Easier

The **Oasis-e Cooling System** uses a proprietary, raised ribbed pad tray, molded directly into the trough, keeping the pad elevated above the drain holes allowing for 100% drainage with no spill-over from the tray.

- The trough drains completely and has a full 8" clean-out for easy maintenance.
- Large capacity basin for ample water supply, installs directly on the ground — no burying necessary.
- Quick connect couplers help to provide quick installation.
- Both Open and Closed Top configurations available, and can be mounted flush or offset from the wall.
