

NEW PRODUCT RELEASE

VAL-CO Adds Control Tubes to Floor Feeding Lines for Better Feed Distribution!

Floor Feeding Control Tubes

The new floor feeding control tubes have larger drop holes to allow more feed into the pans preceding a mid- or end-line control pan.

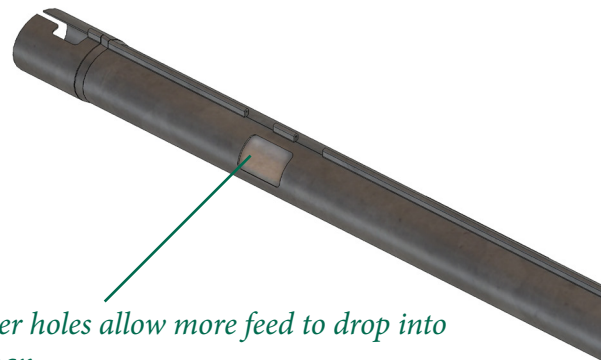

These larger holes decrease feed bypass to ensure all feeders prior to the control pan fill quickly and completely. This ensures birds do not migrate away from the control pan.

The control tubes are labeled with a sticker so that they may be easily differentiated from standard tubes.

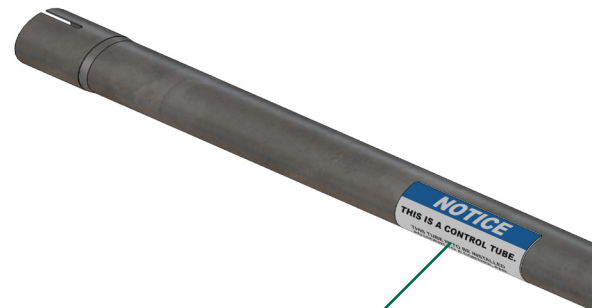

Recommendations:

	Number of Control Tubes Prior to Control Pan			
Gearbox	2 hole tube	3 hole tube	4 hole tube	5 hole tube
359 RPM or less	2	2	1	1
441 RPM	4	3	2	2
657 RPM	4	3	2	2

Best Regards,
Sean Francey, General Manager

Larger holes allow more feed to drop into the pan.

Labels on the tube for easy identification.
