

NEW PRODUCT RELEASE

VAL-CO Introduces the Oasis™ Cool Cell Header Kit & Trough

Improve your farm's cooling system with the VAL-CO Oasis recirculating pad cooling header kit and trough.

New trough uses the same sturdy shape that has been field-proven for years.

Raised ribs in trough keep pad out of water flow to extend pad life and reduce damage to pad bottoms.

Stainless steel trough supports won't rust or stain buildings.

Toolless trough cover opening provides quick access to distribution pipe for cleaning and inspection by holding itself open.

Easy to clean and winterize with multiple access fittings.

Holds approximately 15 more gallons of water. Greater system volume reduces risk of pump running dry.
