

PRODUCT INFORMATION UPDATE

VAL-CO Updates Egg Belt Transfer Assembly

A wider transition for fewer cracked eggs!

Egg Belt Transfer Assembly (412686-Q2)

The transfer assembly for side belt nest systems has been updated to improve the ease with which eggs move from the belts to a cross conveyor.

This metal transfer is sturdier than its plastic predecessor, and slightly wider to prevent congestion as the transfer point. The end result is fewer cracked eggs upon inspection.

A transfer kit includes a cover.

Please contact us with questions at any time.

Best Regards,
Sean Francey, General Manager

Wide metal transfer for durability and fewer cracked eggs.

Cover included.
